CLEAN AIR
DELIVERY RATE
CADR: 141 m³/h

Tests shows:

Three-layered filter system with HEPA H13 filter filters out at least 95% of particles with a size of 0.02 µm (viruses are generally 0.02-0.3 µm²).
For particles ≥ 0.3 µm in size, the filter performance is even up to 99.95%.

In addition to room size, the purifying speed also plays a decisive role when selecting an air purifier. The clean air delivery rate (CADR) shows you at a glance how many cubic metres of air are purified in one hour. The higher the CADR value, the more efficient the air purifier. .

***With a ceiling height of 2.4 m
2) For comparison: According to the German Federal Centre for Health Education, viruses are generally 0.02-0.3 µm in size
